

Low Poly Modular Kitchen

Modular Snap Setup

Modular Elements

The lower and upper kitchen cabinets, shelves, sink, stove, range hood and refrigerator are designed with dimensions based on 0.3-unit increments. This allows them to work together as a modular system.

Grid / Snap Settings

To prevent gaps between the modular elements when moving them, change the Move value from 1 to 0.3. Hold Ctrl while moving the modules. They will snap in 0.3-unit increments and align correctly with each other.

Default	Modular Kitchen
Move = 1	Move = 0.3

Result: cabinets, shelves and other modular elements can be easily repositioned and combined without unwanted gaps.
